

# FOSC-DMARC

## Outside plant demarcation point

The FOSC-DMARC closure is the environmentally sealed enclosure for the fiber management system that provides the functions of fiber splicing and patching in the external network.

The single-element design makes the FOSC-DMARC the ideal solution for a flexible carrier demarcation point with a capacity of up to 4 carriers of 12 fibers each. Extra carriers/customers can be connected to the backbone side of the network without disturbing other, already connected carriers/customers.

FOSC-DMARC has the following functions and features

- Single-ended design
- Base and dome are made of a thermoplastic material and are sealed with a clamp and O-ring system
- 5 round entry/exit ports for drop cables and 1 oval port for 2 cables are included in the base
- Cable seals are manufactured from heat-shrinkable material
- Splicing and patching area are separated by 2 hingeable doors with individual integrated lock
- Carrier side: pigtail strain relief panel (48 pigtails or for the full patch version a 48 connector patchpanel)  
Backbone side: 48 connector patchpanel, suitable for all connector adapter types
- Pigtail or jumper overlength storage area
- Factory-installed transportation tubes allow a fast and easy installation
- Pre-fibering of pigtails at backbone side and/or carrier side is possible
- Closures are standard equipped with ground feed-through and pressure relief valve

## Dimensions and capacities

	FOSC-DMARC
<b>Dimensions (mm)</b>	
Length	710
Diameter without clamp	240
Diameter with clamp	260
<b>Splicing and patching capacity (fibers)</b>	
Backbone side	48
Carrier side	48
<b>Cable ports</b>	
1 Oval port for 2 cables with $\varnothing$ range each	10-25 mm
5 Round ports for 1 cable each with $\varnothing$ range	5-28 mm

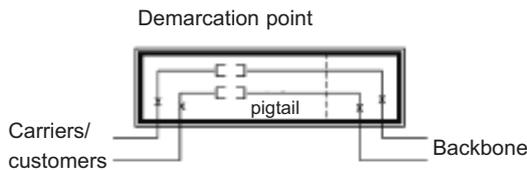

The network element has two sides

- backbone side
- carrier side

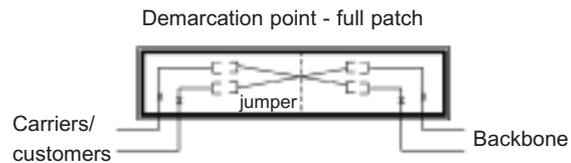

which are physically separated from each other (e.g. by a lockable door).

Extra carriers/customers can be connected to the backbone side of the network.
